

**It's time to
remove the bucket...**

It's wasting your money!

- Wastes expensive heating fuel
- NOT Eco-Friendly
- NOT Produced to any Standard
- NOT Immune to frost build-up
- NOT able to trap cold air
- Satisfaction NOT guaranteed

**...and replace it with a
motorized damper**

**Saves you money and adds
comfort too!**

- Saves 5-20% on heating fuel costs¹
- Eco-friendly
- CSA International Certified
- Gas code approved
- Safety guaranteed
- Stops cold air which increases comfort
- Satisfaction guaranteed²

[1] Based on a 1994 report by "ALTERNATIVE & RETROFIT ENERGIES INCORPORATED" Calgary, Alberta and 1994 tests by the University of Alberta – Department of Mechanical Engineering

[2] Satisfaction guaranteed or Hoyme Manufacturing will refund the cost of the damper

**SAVE
UP TO 20%**
on your fuel
consumption
costs

What's the bottom line for you?

**Hoyme Dampers are cost effective
and add comfort too!**

**INTERFACE ADAPTORS FOR COMPLETE
CONTROL – MILLIVOLT DC, 24 VAC, 120 VAC**

ADP-1101-05A – 120Vac Ventilation Fan Switch, turns on the Exhaust Fan, Furnace Fan, and opens a 24Vac motorized Fresh Air Damper.

ADP-1102-TWP – Same as ADP-1101-05A but also opens fresh air damper when furnace fires.

ADP-0241-05A – 24Vac signal or dry switch turns on the Exhaust Fan, Furnace Fan, and opens a 24Vac motorized Fresh Air Damper.

ADP-0242-05A – Same as ADP-0241-05A but also opens fresh air damper when furnace fires.

**How to Get
THE MOST
from your Mid-
& Hi-Efficiency
Heating System**

**HMI
HOYME**

Hi-Efficiency Heating Systems

Problem

All furnaces, even hi-efficiency, have a make-up air duct. An uncontrolled air duct is worse than an open window as it draws in cold air to your home all winter. This makes your heating system inefficient.

Solution

Install a Hoyme **HAC Universal Air Damper** to positively control the make-up air allowed in your home as your system needs it or when you want it.

Result

Now your entire system is efficient and effective, not just your furnace.

Sizes: 2" – 30"
HAC Universal Air Damper

✓ **CGA/AGA Approved for furnaces and boilers using natural gas, propane, or oil.**

✓ **10 Year Limited Warranty**

“ I would recommend the installation of these units wherever fuel fired appliances are installed...”

...from a letter by
B. Mould, while Chief Building Inspector

Mid-Efficiency Heating Systems

Problem

Next to your furnace is a combustion air duct, which may terminate into an ineffective bucket. Cold air pours into your basement continuously. Shutting this duct manually is unsafe and inefficient. Your furnace needs air, but only when it is firing.

Solution

Install a Hoyme **HOM Combustion Air Damper** which is both Gas code approved and c CSA us certified. This damper is built to shut off the cold air automatically but guaranteed to Open before the furnace fires.

Couple it with the **HAC Universal Air Damper** to maximize your existing heating system efficiency. (See Hi-Efficiency Heating Systems)

Result

You have an efficient, automatic, and safe way to prevent cold air from coming into your home. Your basement stays warm, and you burn less fuel (reducing your carbon footprint) and saves you money.

Sizes: 4" – 9" + Modules
HOM Combustion Air Damper

These easily installed Motorized dampers, attached to the heating system, open when your furnace is firing to provide fresh air for fuel efficiency. When your furnace stops, the dampers close, preventing cold air from coming in. Stopping cold air saves energy and increases comfort.
